

Bridgewater Water Department's

DRINKING WATER PFAS6 PUBLIC EDUCATION

*This material contains important information about your drinking water.
Please translate it, speak with someone who understands it or ask the contact listed below for a translation.*

Bridgewater Water Department has not violated the drinking water regulations. A PFAS6 MCL violation occurs when the average of all monthly samples collected over a quarter exceeds the MCL. If our system had violated the PFAS6 Maximum Contaminant Level (MCL) our system would have issued a PUBLIC NOTICE.

On October 2, 2020, the Massachusetts Department of Environmental Protection (MassDEP) promulgated a new drinking water regulation and maximum contaminant level (MCL) of 20 nanograms per liter (ng/L) for the sum of six per- and polyfluoroalkyl substances (called PFAS6). Bridgewater Water Department has confirmed elevated levels of PFAS6 in the drinking water during routine monitoring. Even though the level is above the MCL, a PFAS6 MCL violation has not occurred, as violations are usually based on three months of testing. Instead, we are required to provide you with these materials to make you aware of the elevated levels so you can make informed decisions about your drinking water while we continue to monitor the water supply.

PFAS6 Results for Wells #8 and #9					
Quarterly Compliance Period	Monitoring Period	Sample Collection Date	PFAS6 Result (ng/L)	Quarterly Average (ng/L)	PFAS6 MCL (ng/L)
Quarter 3, 2021	Month 1	7/13/2021	16.57	19	20
	Month 2	8/31/2021	19.36		
	Month 3	9/22/2021	20.65		
* If any sample result would cause the quarterly average to exceed the MCL, the PFAS6 MCL has been violated.					

Wells #8 & #9 combine at 1425 High Street, where the elevated levels of PFAS6 were detected. This location is one of four entrance points/sources that supplies drinking water to our system. PFAS6 levels were reported below the 20 ng/L MCL at these other locations.

Some people who drink water containing PFAS6 in excess of the MCL may experience certain adverse effects. These could include effects on the liver, blood, immune system, thyroid, and fetal development. These PFAS6 may also elevate the risk of certain cancers. For more information on PFAS, see the links below.

What is PFAS6?

PFAS6 includes perfluorooctanoic acid (PFOA), perfluorooctane sulfonic acid (PFOS), perfluorononanoic acid (PFNA), perfluorohexanesulfonic acid (PFHxS), perfluorodecanoic acid (PFDA) and perfluoroheptanoic acid (PFHpA). PFAS are man-made chemicals that have been used in the manufacturing of certain fire-fighting foams, moisture and stain resistant products, and other industrial processes. For more information see weblinks listed below on page 3.

What should I do?

For Consumers in a sensitive subgroup (pregnant or nursing women, infants and people diagnosed by their health care provider to have a compromised immune system)

- **Consumers in a sensitive subgroup (pregnant or nursing women, infants and people diagnosed by their health care provider to have a compromised immune system) are advised not to consume, drink, or cook with water when the level of PFAS6 is above 20 ng/L.**
- **Consumers in sensitive subgroups** are advised to use bottled water for drinking and cooking of foods that absorb water (like pasta).
- **For infant formula**, use bottled water or use formula that does not require adding water.
- **Bottled water should only be used if it has been tested.** The Massachusetts Department of Public Health requires companies licensed to sell or distribute bottled water or carbonated non-alcoholic beverages to test for PFAS. See <https://www.mass.gov/info-details/water-quality-standards-for-bottled-water-in-massachusetts#list-of-bottlers->

For all other consumers not in a sensitive subgroup

- **If you are not in a sensitive subgroup**, you may continue to consume the water because the 20 ng/L value is applicable to a lifetime consuming the water and shorter duration exposures present less risk.
- **If you have specific health concerns regarding your past exposure**, you should see the Centers for Disease Control and Prevention's link below and consult a health professional, such as your doctor.
-

Steps you can take to reduce your intake - Consider taking the following steps while actions are being implemented to address this issue:

- **For older children and adults (not in a sensitive subgroup)**, the 20 ng/L value is applicable to a lifetime of consuming the water. For these groups, shorter duration exposures present less risk. However, if you are concerned about your exposure while steps are being taken to assess and lower the PFAS6 concentration in the drinking water, use of bottled water will reduce your exposure.
- **Home water treatment systems** that are certified to remove PFAS by an independent testing group such as NSF, UL, or the Water Quality Association may be effective in treating the water. These may include point of entry systems, which treat all the water entering a home, or point of use devices, which treat water where it is used, such as at a faucet. For information on selecting home treatment devices that are effective in treating the water for PFAS6. see attached MassDEP weblinks pg3.
- **In most situations, the water can be safely used for washing foods, brushing teeth, bathing, and showering.**

Please note: Boiling the water will not destroy PFAS6 and will somewhat increase its level due to evaporation of some of the water.

What is being done?

- Wells 8 and 9 remain in operation providing water to meet water demand while we investigate options.
- We plan on sampling wells individually to determine if it is possible to reliably blend sources below 20 ng/L.
- We are investigating treatment options to remove PFAS6.
- We will provide updates and make information available on the town website: [Water Supply \(Water Dept\) | Bridgewater, MA \(bridgewaterma.org\)](#)

Where can I get more information?

For more information, please contact Jonas Kazlauskas at (508) 697-0910 or Jkazlauskas@bridgewaterma.org
